

Virginia's Eastern Urban Transportation Corridor

Only **14%** of the Commonwealth's land area, but **60%** of the State's population.

One of the nation's more heavily-used and congested travel corridors. Population and travel densities approaching those of northeast corridor.

Highway capacity enhancement plans limited by physical and environmental constraints, as well as funding. No comprehensive rail development plans yet approved. Population wave coming. What will this look like in 2030?
